SUMMARY

Software Engineer with 3+ years of experience designing and delivering scalable, secure full-stack applications across backend, frontend, and cloud environments. Experienced in C#, SQL, React, RESTful APIs, and AWS, with a proven track record of building systems for millions of users, improving system reliability, automating workflows, and optimizing data accuracy. Strong collaborator in Agile teams, skilled in API design, cloud integration, and production-grade software delivery.

EDUCATION

Stony Brook University | *Bachelors of Science in Computer Engineering - Cum Laude, Dean's List*

May 2022

EXPERIENCE

Software Developer / Consultant | *Fast Enterprises*

Aug 2023 - Present

- Improved scalability and reliability of a tax processing platform serving 2M+ users by engineering backend C# and SQL distributed system components, optimizing database queries, and enhancing system monitoring and logging
- Reduced manual taxpayer payment processing workload by designing and launching a self-service payment plan platform, automating enrollment workflows, validation logic, and backend processing for millions of users
- Built a scalable FuelTrac API data ingestion pipeline by implementing asynchronous processing, schema transformations, and automated error handling, improving transaction processing accuracy and operational efficiency
- Improved compliance accuracy and audit transparency by developing automated SQL reconciliation tools that validated FuelTrac transaction data against tax return records and generated audit reporting outputs
- Increased deployment reliability and velocity by working in Agile teams and contributing to automated testing and CI/CD workflows
- Improved system uptime and observability by implementing monitoring, logging, and automated remediation for production

Software Engineering Fellow | *Headstarter AI*

May 2023 - July 2023

- Developed scalable full-stack applications with modern cloud architectures by applying distributed system design principles, asynchronous APIs, and event-driven workflows under mentorship from engineers at major technology companies
- Strengthened system design and production engineering skills by building and deploying applications using cloud services, automated testing practices, and collaborative Agile development workflows

PROJECTS

Sentinel Risk Engine (Transactions Dashboard) | *React, JavaScript, Node.js, Express, PostgreSQL, REST APIs, Python, Vercel*

- Built a full-stack AML transaction dashboard that evaluates financial activity using anomaly indicators to flag high-risk transactions
- Developed REST APIs and relational database schemas for transaction ingestion, querying, and real-time risk analysis dashboards

Recipe Share | *Android Studio, Java, APIs, Database, Google Cloud*

- Designed and developed a multi-user Android recipe-sharing application using Android Studio and Java
- Integrated Spoonacular API and Google Sign-In, enabling likes, comments, and real-time user interactions via Firebase
- Designed scalable backend data models for user-generated content and activity tracking

Tech Incubator (Talent Match) | *Visual Studio, HTML, CSS, JavaScript, React.js, Bootstrap, Firebase*

- Developed a task management web application using React.js, Vite, HTML/CSS, and Bootstrap
- Implemented OAuth 2.0 authentication and integrated Firebase backend services for real-time data storage and updates
- Designed end-to-end CRUD workflows, managed UI state, and deployed a production-ready build to cloud hosting

CERTIFICATIONS AND SKILLS

Certifications: AWS Certified Cloud Practitioner – CLF-C02

Languages: C#, Python, Java, JavaScript, TypeScript, SQL, HTML5, CSS3, VB.NET, Bash

Frameworks/Libraries: React.js, Node.js, Express.js, Bootstrap, jQuery, Mongoose

Backend/APIs: REST APIs, SOAP APIs, XML, JSON, API Design / Integration

Databases: PostgreSQL, MySQL, MongoDB, SQL Server (SSMS)

Cloud/DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, Git, GitHub, Bash, CI/CD

Tools: Visual Studio, VS Code, Postman, Android Studio, Jira, Teams, Excel

Engineering Practices: OOP, Agile/Scrum, Test-Driven Development, Distributed Systems, Asynchronous Processing
